

Bron Afon

Electric Vehicles (EV) and charging

Can I install an electric vehicle EV charge point at my home?

Installing an EV charge point yourself would mean getting several different permissions from us and Torfaen Council. We currently don't have any funding to put in EV charge points. We are focusing on improving the energy performance of homes first. This may change, so we will provide updates as we get them

Will Bron Afon install an Electric Vehicle (EV) charger for me?

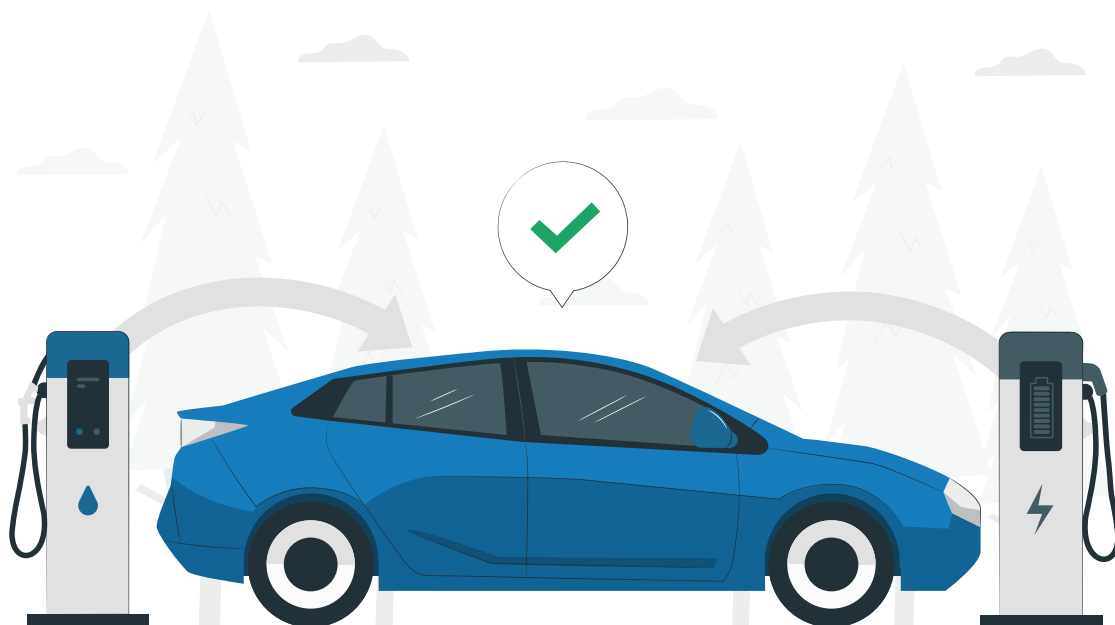

With limited funding available, it isn't our priority to install Electric Vehicle (EV) charge points/-facilities for our homes. Our current focus is to improve the energy performance of our homes and where practical, to provide renewable energy sources, such as solar PVs, to help our tenants minimise the impact on their energy bills.

Torfaen Council is also looking at the most suitable ways to provide charging points in the county.

Please use a web search to find the latest list of charge points in Torfaen.

Will Bron Afon put in a driveway for me to have an EV charge point?

We won't be able to do this. If you want to do it yourself, you'll need to fill in an Alterations and Improvements form and send it to our Asset Management Team for them to consider your request. If it's approved, you will have to cover the cost of the alterations yourself.

Bron Afon is working to deliver energy efficiency measures to our homes and with our customers to help tackle climate change.
